

Partnership System App: Create, maintain and practice systems with your partners

1. Step 1: Login
2. Step 2: Pick your partner: If you have already created a system with this partner, it pops up (view mode by default, but edit button available to go to edit mode). If not, you get a “create system” button
3. Create system: Asks if you want to create from scratch or a template provided by us, or using one of my systems with my other partners as a starting point. I am also given the option of tagging one or more partners to the “system” that I am creating
4. Whichever option you pick, you are in “edit” mode
5. In “edit” mode, you can do the following
 - a. Create new workspaces – a workspace can contain a systems table, text, you can upload a pdf (which can be read in the view mode with the page navigator).
 - b. All text can be hyperlinked to call other workspaces – so clicking on “xyz” will bring up the workspace called “xyx” – this can be viewed in 3 modes: as a comment pop up, as a split view, that appears alongside, and as a new page
 - c. Idea is to logically build systems in a way that is easy to expand/ modify/ read and understand
 - d. “ Save” the workspace with a name.
6. The login page will also have “My workspaces”, “Workspace Library” and “My partners” (“workspace library” will have pre-made systems by the app builders saved as workspaces)
7. Once a “system” is tagged to 2 or more people, edits by each person is identified separately (until “accepted”)
